

FEATURES

- Ultralow power: as low as 23 μA in measurement mode and 0.1 μA in standby mode at $V_S = 2.5\text{ V}$ (typical)
- Power consumption scales automatically with bandwidth
- User-selectable resolution from 10 to 13 bits
- 4 mg/LSB scale factor in all g ranges
- 32-sample FIFO minimizes host processor load
- Single tap, double tap, and free-fall detection
- Activity/inactivity monitoring
- Supply voltage range: 2.0 V to 3.6 V
- I/O voltage range: 1.7 V to V_S
- SPI (3- and 4-wire) and I²C digital interfaces
- Flexible interrupt modes mappable to either interrupt pin
- Measurement ranges selectable via serial command
- Bandwidth selectable via serial command
- 10,000 g shock survival
- Pb free/RoHS compliant
- Small and thin: 3 mm \times 5 mm \times 1 mm LGA package

ENHANCED PRODUCT FEATURES

- Supports defense and aerospace applications (AQEC standard)
- Extended industrial temperature range (-55°C to $+105^\circ\text{C}$)
- Controlled manufacturing baseline
- One assembly/test site
- One fabrication site
- Enhanced product change notification
- Qualification data available on request

APPLICATIONS

- Industrial equipment
- Aerospace equipment

GENERAL DESCRIPTION

The ADXL345-EP is an extended performance version of the ADXL345, which is a small, thin, ultralow power, 3-axis accelerometer with high resolution (13-bit) measurement at up to $\pm 16\text{ g}$. Digital output data is formatted as 16-bit twos complement and is accessible through either a SPI (3- or 4-wire) or I²C digital interface.

The ADXL345-EP is well suited for extended temperature range industrial and aerospace equipment. It measures the static acceleration of gravity in tilt-sensing applications, as well as dynamic acceleration resulting from motion or shock. Its high resolution (3.9 mg/LSB) enables measurement of inclination changes less than 1.0° .

Several special sensing functions are provided. Activity and inactivity sensing detect the presence or lack of motion by comparing the acceleration on any axis with user-set thresholds. Tap sensing detects single and double taps in any direction. Free-fall sensing detects if the device is falling. These functions can be mapped individually to either of two interrupt output pins. An integrated memory management system with a 32-level first in, first out (FIFO) buffer can be used to store data to minimize host processor activity and lower overall system power consumption.

Low power modes enable intelligent motion-based power management with threshold sensing and active acceleration measurement at extremely low power dissipation.

The ADXL345-EP is supplied in a small, thin, 3 mm \times 5 mm \times 1 mm, 14-lead, enhanced plastic package.

RELATED DOCUMENTS

The ADXL345-EP is, by definition, an extended performance variation of the ADXL345 accelerometer. All ADXL345 datasheet descriptions are applicable and not repeated in this document, so users should refer to it for complete functionality and product description. Information and data in this ADXL345-EP subset datasheet supersede those in the standard ADXL345 datasheet.

SPECIFICATIONS

$T_A = 25^\circ\text{C}$, $V_S = 2.5\text{ V}$, $V_{DD I/O} = 1.8\text{ V}$, acceleration = 0 g, $C_S = 10\text{ }\mu\text{F}$ tantalum, $C_{I/O} = 0.1\text{ }\mu\text{F}$, output data rate (ODR) = 800 Hz, unless otherwise noted. All minimum and maximum specifications are guaranteed. Typical specifications are not guaranteed.

¹ The typical specifications shown are for at least 68% of the population of parts and are based on the worst case of mean $\pm 1\sigma$, except for 0 g output and sensitivity, which represents the target value. For 0 g output and sensitivity, the deviation from the ideal describes the worst case of mean $\pm 1\sigma$.

² Cross-axis sensitivity is defined as coupling between any two axes.

³ Bandwidth is the –3 dB frequency and is defined as half the output data rate, bandwidth = ODR/2.

⁴ The output format for the 3200 Hz and 1600 Hz ODRs is different from the output format for the remaining ODRs. This difference is described in the ADXL345 data sheet.

⁵ Output data rates below 6.25 Hz exhibit additional offset shift with increased temperature, depending on selected output data rate. Refer to the ADXL345 data sheet for details.

⁶ Self-test change is defined as the output (*g*) when the SELF_TEST bit = 1 (in the DATA_FORMAT register, Address 0x31) minus the output (*g*) when the SELF_TEST bit = 0. Due to device filtering, the output reaches its final value after $4 \times \tau$ when enabling or disabling self-test, where $\tau = 1/(\text{data rate})$. The part must be in normal power operation (LOW_POWER bit = 0 in the BW_RATE register, Address 0x2C) for self-test to operate correctly.

⁷ Turn-on and wake-up times are determined by the user-defined bandwidth. At a 100 Hz data rate, the turn-on and wake-up times are each approximately 11.1 ms. For other data rates, the turn-on and wake-up times are each approximately $\tau + 1.1$ in milliseconds, where $\tau = 1/(\text{data rate})$.

ABSOLUTE MAXIMUM RATINGS

Parameter	Rating
Acceleration	
Any Axis, Unpowered	10,000 <i>g</i>
Any Axis, Powered	10,000 <i>g</i>
V_S	−0.3 V to +3.9 V
$V_{DD I/O}$	−0.3 V to +3.9 V
Digital Pins	−0.3 V to $V_{DD I/O} + 0.3$ V or 3.9 V, whichever is less
All Other Pins	−0.3 V to +3.9 V
Output Short-Circuit Duration (Any Pin to Ground)	Indefinite
Temperature Range	
Powered	−55°C to +105°C
Storage	−65°C to +150°C

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.
